Series -

ID: 008381

Characteristics

- Precise location in regulation screw
- Easy to fit and remove
- Can remain situated in regulating screw
- Specially shaped non-slip wheel
- Hole in wheel for optional tethering

Applications

- Dispense valves with regulating screw in outlet nozzle

Description

The adjuster wheel makes it easier to adjust the flow adjuster screws of 40.00x and 46.00x series dispense valves.

The hexagonal section of the adjuster wheel securely locates into the similarly shaped flow adjuster. The specially shaped wheel enables easy turning of the regulating screw and therefore the flow rate.

A hole in the wheel allows for optional tethering for security or ease of accessibility
