Description

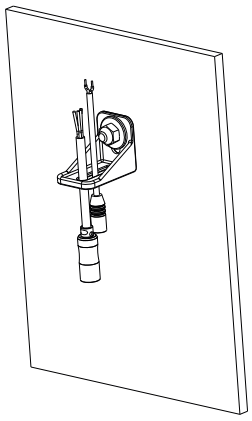

These fixing brackets are made from rigid polyamide (PA 66) and are suitable for use with **40.008** and **46.008** series single and banked valves.

The oblong holes cut into the bracket are positioned between the coil bracket and the coil nut and also have sufficient space to easily accommodate the valves' breather tube.

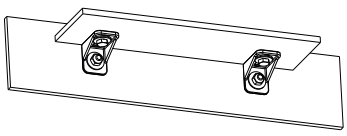

Three different sizes of fixing brackets are available to offer reliable mounting solutions for various valve specifications. They are particularly suited for use in applications where space is at a premium such as drinks vending machines, but could also be used for a variety of other fixing tasks such as cable routing, the support of light load bearing surfaces or to fix side panels.
